

COBIT®5 Implementation

Duration 3 Days

COURSE OUTLINE

COBIT 5 helps enterprises maximize the value of their information - the currency of the 21st century. Through its 16-year history, COBIT has been used by enterprises around the world to improve management of enterprise IT and governance. COBIT 5 provides globally accepted principles, practices, analytical tools and models designed to help business and IT leaders maximize trust in, and value from, their enterprise's information and technology assets. COBIT 5 provides guidance to executives and those charged with making decisions concerning the use of technology in support of organizational objectives. This framework helps business leaders address the needs of all stakeholders across the enterprise and ultimately maximize the value from information technology.

COBIT 5 integrates established ISACA risk and value management frameworks into an established governance framework provided for in earlier versions of COBIT.

This course is a 3-day practical-based classroom training that enables IT and business professionals to apply COBIT 5 to specific business situations, pain points, trigger events and risk scenarios within the organization. Attendees will be exposed to organizational scenario-based application of the COBIT 5 framework in addressing the spectrum of issues typically faced by the modern technology-leveraged enterprise. The continual improvement approach is espoused to address requirements and issues in a maintainable and sustainable approach to managing enterprise IT.

The official APMG COBIT5 Implementation examination is included as part of the course and takes place at the end of the course.

OBJECTIVES

Candidates can expect to gain key competencies, knowledge and skill related to this certification specifically in:-

- Analyzing enterprise drivers
- Understanding implementation challenges, causes and critical success factors
