

Certified Secure Computer User (CSCU) v3

Duration 2 Days

COURSE DESCRIPTION

The CSCU program is designed to educate students on the safe operation of computers, devices, and networks by focusing on the more practical aspects of networking and security, allowing them to expand their skills. Students will develop a fundamental understanding of computer, device, and network security issues, including identity theft, credit card fraud, online banking phishing scams, malware, loss of sensitive information, and social engineering. This certification is an excellent complement to educational offerings for knowledge workers and end-users interested in becoming secure power users.

CSCU v3 goes beyond security awareness version 3 includes:

- Coverage on the latest Operating Systems
- Latest Tools and Techniques to maximize security
- Coverage on securing Gaming Consoles and IoT/Smart Home Devices
- Techniques to secure Home Offices and Remote Work locations
